How to find us

Take the A3 from Nuremberg to Würzburg; at the Fürth/Erlangen motorway intersection, take the A73 towards Bamberg until you reach the exit marked 'Möhrendorf/Baiersdorf'.

Drive on until you reach Baiersdorf, and turn off left towards the town center (direction 'Zentrum'). In the main street, you will see a Schlecker store. Immediately after, turn left into the entrance to our yard, where you'll see our company sign welcoming you.

General Terms and Conditions of Business

Dear Business Friend,

We are pleased to submit our latest price list to you.

All deliveries shall be exclusively subject to our general terms of payment and delivery.

Prices

The prices shown in the latest catalog shall be applicable. All prices indicated in the catalog are net excluding the statutory value-added tax currently applicable.

Delivery costs

Germany: Postage is charged according to weight plus 1,50 €uro forwarding expenses.

Should boxes for dangerous goods be required, these will be charged at 8,- €uro each.

Foreign countries: Postage is charged according to weight plus 5,- €uro forwarding expenses.

Should boxes for dangerous goods be required, these will be charged at 8,- €uro each.

Minimum or value

A small order surcharge of 5 EUR shall be charged for orders below 30 EUR.

Terms of payment

Germany and EU: Invoices are payable within 14 days net cash.

Other countries: Advance payment or according to prior agreement.

Methods of payment

Invoice, payment by automatic debit transfer (only within Germany) or cash on delivery.

Credit cards: Visa, Eurocard, Diners and Mastercard.

Default in payment

A processing fee of 3,- €uro shall be charged per reminder if there is a delay in payments.

Additionally, default interest at the legally permissible rate shall be charged after failure to pay on due date.

Retention of title

All goods delivered shall remain the property of Hammerl GmbH & Co. KG until full payment has been made. It is prohibited to transfer ownership of the goods or to assign these by way of security to a third party before full payment has been effected.

The goods delivered shall be conveyed at the risk of the consignee.

Reservation of right of modification

Please note that the prices for resins and colored resins may be subject to price fluctuations. For this reason the valid daily prices shall always be charged.

Safety regulations

Keep varnishes away from heat and fire and ensure good ventilation. Take precautionary measures to avoid inhaling fumes. Avoid skin and eye contact.

It is essential that spirit varnishes and varnishes with propolis additive are refilled into glass bottles after delivery.

We must forward varnishes in metal containers due to forwarding regulations.

Place of performance and jurisdiction

The place of performance for deliveries is D-91083 Baiersdorf. In case of disputes, the courts at D-91052 Erlangen have jurisdiction and venue. The contractual relations between the parties shall be governed by and construed in accordance with the laws of the Federal Republic of Germany exclusively. Any application of the laws on the international sale of goods is precluded.

Turnover tax identification number for customers from the EU

Please indicate on the first order whether you have a turnover tax identification number.

The German value added tax is not applicable if you have a turnover tax ID number.

However, if you do not have a turnover tax identification number, we must charge you with the German statutory value-added tax in addition to the price shown in the catalogue.

This provision is only applicable to customers from the member states of the EU. Value-added tax is not applicable for exports to any other countries.

Consumer warning information

The importer of our goods is responsible for ensuring that the goods are labeled with the consumer warning information conforming to the laws of the country in which the goods will be sold.

The following is an introduction to our varnishes - but first of all, we'd like to make a few basic comments. We offer our customers only the most reliable, highest quality instrument varnishes that have been tested thousands of times. In order to meet the very specific requirements of every instrument-maker for varnishes of different types, we have developed a variety of varnishes with different characteristics. Our spirit varnishes, volatile oil varnishes and Italian balsamic oil varnishes are made only from pure nature resins dissolved in spirit, natural volatile oils or balsams. All our varnishes are produced with care and stored for long periods of time, and are thus clear and pure, allowing the features of the wood to shine through in all their freshness.

Spirit varnish, quality Ia

Spirit varnish has always been the varnish most commonly used for stringed instruments. It dries quickly, thus allowing a daily coating. The coating must be applied quickly, however, in order to prevent the varnish from clouding, especially on color varnish. Every coat must be thoroughly dried before the next coat is applied in order to prevent any cracks from materialising later. (Press hard on the varnish with your thumb for a few seconds. If it fails to make a print in the varnish then you can apply the next coat). Spirit varnish can be smoothed well with pumice – stone or rottenstone and polished with an appropriate Polish.

JOHA® Propolis mixed varnish

It is an Italian type of spirit varnish which, in spite of being a very soft varnish, dries well. After it has been left to dry for a few days it polishes very well. As the name suggests this varnish is partly made up of propolis and is of a particularly fine quality. (Its natural color is a beautiful antique yellow). This varnish should be smoothed with rottenstone and polished after it has dried thoroughly (for at least 30 days)

JOHA® Italian balsamic oil varnish

The Italian balsamic oil varnish is manufactured according to old Italian recipes. Volatile oils and balsams the main solvents used to produce a soft varnish which retains its suppleness after it has dried. The combination of soft, elastic resins and volatile oils used as solvents results in an excellent varnish which is easy to apply. The mixture of resins and solvents was made in such a way that the resins would not become brittle once the solvents had evaporated, but rather would form an homogenous, elastic coating of varnish. The Italian balsamic oil varnish, with its elasticity, gives the stringed instruments a very good resonance, soft sound reproduction and a very attractive appearance.

JOHA® Volatile oil varnish

An outstanding oil varnish made with balsams and volatile oils which dries much faster than normal oil varnishes. As a result, however, it is not as easy to paint on as normal oil varnish. Because it contains propolis, it stays elastic for a long time and allows the wood to vibrate properly. However, this means that volatile oil varnish may remain sensitive to heat and pressure even after years. After the last coat has dried (30 days to 6 weeks), the volatile oil varnish can be smoothed off with tripoli earth and polished.

Oil varnish, standard quality or quality Ia, with lavender

This varnish applies very well and virtually anyone can do a good job when using it. It should be diluted a bit with balsam turpentine, despite the fact that it then takes a little longer to dry. (Test this, too, with your thumb to see if it is dry). In the long run this varnish becomes somewhat harder than spirit varnish. You can smooth this varnish, too, with pumice – stone or rottenstone and work it to a gentle shine with Polish and gloss oil.

JOHA® Retouching varnish

JOHA® retouching varnish (order# 1800 - 1840) is ideal for repairing damaged varnish on musical instruments. It is made using selected resins and a special solvent, thus providing excellent adhesion to damaged areas.

In order to achieve better cover, JOHA® Retouching Varnish has a slightly stronger color.

The composition of this special retouching varnish means that it is ideal for repairs to both spirit and oil varnishes.

The appropriate thinner (order# 1840) should be used with JOHA® retouching varnish.

JOHA® retouching varnish is available in six colors: clear, brown, yellow, red, golden yellow and black.

All colors can be mixed with each other.

The retouching varnish should be thickly dabbed or painted onto the area to be repaired; leave to dry completely and then sand smooth to match the remaining varnish.

JOHA® color extract

JOHA® color extract (order# 2901 - 2910) is a liquid, light-resistant, transparent color for tinting colorless JOHA® varnishes, although it can also be used with other spirit, oil and synthetic resin varnishes.

JOHA® color extract is available in the following colors: yellow, brown, red, amber, red brown, gold brown, gold yellow, black, blue and green.

The colors can be mixed with each other, so that any shade of instrument varnish can be matched.

Our JOHA® color extract is superior to spirit and oil soluble powder colors as it is much more resistant to light than powder colors.

JOHA® Color extract is dissolved completely and can be added directly to the varnish.

Stains and primers

If the unfinished instrument is to have a beautiful basic color, it should be stained before varnishing.

But since the hardness of wood can vary, thus absorbing the stain unevenly, it is recommended that the basic instrument should be pre-treated first to ensure that the color is attractively even.

Instructions for pre-treating the wood

Dissolve about 30 g of gelatin powder (order# 7460) in a liter of warm water and then heat until the solution is clear and thin. Apply the warm solution evenly with a bristle brush, leave to dry completely and sand down very carefully with a fine sandpaper.

The various stains described below can then be applied.

Instructions for application of water-based stains

Water-based stains (order# 3096-3150) are available in some 20 shades. Dissolve contents of the bag, following the instructions on the label. To make the color lighter or deeper, change the proportion of water used.

Apply the stain solution evenly to the cleanly sanded instrument using a sponge or brush (order# 9404 - 9412). Wipe off excess stain with a dry rag.

JOHA® Antique stain # 421

Stain # 421 - antique gray-brown (order# 8421) is a ready-mixed oxidation stain. After application, the color changes under the effect of air and daylight from being colorless to antique light-middle brown.

This stain is applied exactly as described above. Once the required color has been reached, gently sand with a fine sandpaper and apply 1 coat basic varnish. This prevents further modification of the color.

Ideally, one should carry out a test stain and varnish to see what the final result will be, since the colors will vary with different types of wood. This stain particularly draws out timber rings.

JOHA® stain # 423 and JOHA® stain # 402 M

Stain # 402 M (order# 8402) is a rich brown, ready-made stain which should be used if a dark instrument is required.

Stain # 423 (order#8423) is a ready-made orange stain made from natural dyes. Use as water-based stains.

How to varnish a violin

First pretreat the cleanly sanded instrument using the enclosed gelatin powder dissolved in 250 ccm hot water. After drying, sand well and stain using stain # 421, applied with a stain sponge. Excess stain should be removed with a lint-free cloth. Make sure that there are no glue spots on the wood, as these will prevent the stain from being absorbed. The color of the stain will change with the effect of light to antique brown, depending on the time allowed for absorption - from two to ten hours.

After the required shade has been reached, the instrument should be painted over immediately with one coat of basic primer varnish. Repeat after about 4 hours. Leave to dry well between the first and second coats of primer and sand briefly using sandpaper #400. Carefully remove sanding residue from the instrument using a brush or cloth.

Then apply approx. 2-3 coats of colored varnish until the color is as required. Leave to varnish to dry well between coats, for at least one day, and preferably 2-3 days. Make sure that the brush is always full of varnish when painting in order to avoid streaking. In addition, the color varnish and cover varnish should be diluted with varnish thinner. This can also be used to clean the brush.

Only with spirit varnish

If the brush hardens, place in thinner and leave to soften.

If the varnish is slightly uneven, sand down in between using sandpaper # 400. Then apply at least 4-6 coats of cover varnish. Once again, leave to dry properly between coats. The more coats of varnish, the longer the drying time. Sand down in between if necessary.

After the last coat of varnish has been applied, leave the instrument to dry for 2-4 weeks and then smooth down using tripoli earth and oil. First dip a linen cloth in polishing oil and then in tripoli earth and smooth down the instrument. If large amounts of varnish have to be sanded off, another coat of cover varnish can be applied after the Polish residues have been completely cleaned off.

The violin can now be finished (glue on fingerboard, fit in pegs, etc.). Then sand the grip of the neck cleanly with sandpaper #180.

Finally, Polish the instrument to a shine. It is important to work in a room that is at a reasonable temperature.

Dirt and resin dust can be removed from the instrument after playing using the varnish cleaner enclosed.

We hope you enjoy playing the instrument you have made for yourself.

VIOLIN VARNISHES

Interesting information
On resins and basic materials
For violin advice on varnishing

Edited by Josef and Reiner Hammerl
Translated from the German by
Jess Nierenberg

A list of dyeing resins, their color and solvents is shown below. This is a general overview and is intended as a Guide. Please experiment yourself, using potash, ammonia solution, iron chloride etc. A detailed description of The resins and dyeing resins is given in our book “**VIOLIN VARNISH**”

DYEING RESIN	COLOR	SOLVENT	COMMENTS
Acaroid resin	red	Spirit	
Alkanna root or alkanet	red	Spirit Turpentine Volatile oils	may turn slightly bluish
Alicarin =madder	As for madder root but more highly concentrated		
Aloe	yellowish – brown to brown	Spirit Water	heat to dissolve heat to dissolve
Asphalt	brown	Spirit -acetone mixture add Spirit	make into paste
Logwood extract	black	Water	boil up logwood extract + iron vitriol. Place wood in solution and if possible boil with it.
Campeachy wood also known as logwood	dark red yellow	Water Spirit	heat to dissolve heat to dissolve
Catechu	warm brown brown to red brown	Spirit Water	heat to dissolve heat to dissolve
Cochineal	red	Spirit + spike oil	reduce to powder and heat to dissolve. Caution: easily turns violet.
Curcuma root	yellow	Spirit	heat to dissolve
Dragon´s blood	red	Spirit Volatile oils	heat to dissolve heat to dissolve
Safflower	yellowish – orange yellow reddish - yellow	Water + soda Water + potash Spirit	boil up boil up heat to dissolve
Pernambuco or redwood	yellowish – brown to reddish – brown golden yellow	Water + potash Spirit	boil up heat to dissolve
Gallnut	black	Water + iron chloride	boil up
Yellow wood extract Liquid	yellow yellow	Spirit Water	readily soluble
Guaiacum	brown	Spirit	heat to dissolve
Gamboge	yellow	Spirit	heat to dissolve Caution: TOXIC !!!
Kamala	golden orange orange	Spirit Water + potash	heat to dissolve heat to dissolve, when cool add ammonia solution
Madder root	red	Spirit	Prepare first in a small amount of ammonia solution
Orlean	yellow orange - red	Water Spirit Volatile oils	heat to dissolve heat to dissolve heat to dissolve
Saffron (real saffron) in strands	yellow yellow	Spirit Water + borax	heat to dissolve heat to dissolve
Sandalwood	red to orange	Spirit + copaiva balsam	heat to dissolve
Onion skins	old yellow to old gold	Water + potash or Water + soda	heat to dissolve heat to dissolve
